# we aren't waiting for the future of healthcare

## TELEDACTYL

## we're building it

*The United States healthcare system is in dire need of a more efficient method to preserve and protect personal health information, reduce healthcare costs, increase provider access and improve methods of payment for health care services. Out of $3.5 trillion in spending last year, an estimated $800 billion in wasted funds were attributed to costs other than direct healthcare. Teledactyl seeks to combat this issue head on.*

**What is Teledactyl?** Teledactyl is being developed as a total solution for the new generation of healthcare. Through its original blockchain system, Teledactyl creates a secure, permanent digitized personal health record (PHR) for users. The patient can then share his/her own record with providers, reducing frustration for both parties in accessing records across offices and health systems. In addition, Teledactyl will offer a unique secure payment option, providing a patient-to-provider ("P2P") payment system that increases healthcare per dollar and reimburses providers nearly instantaneously after services are offered. Even better, patients don't have to rely on third-party insurers or payors; the power lies with them.

## Three primary goals:

1. Reduce the overall wasteful spending and costs attributable to redundancy in health record sharing through Personal Health Record (PHR) blockchain technology, giving ownership back to the patient;

2. Improve the privacy and security of healthcare patient information through a secure, encrypted blockchain PHR system;

3. Create an ecosystem that increases the overall optimized experience for patients and providers that reduces the need to rely on government or third-party insurers to manage personal healthcare.

## Financials:

Teledactyl seeks to raise $25M through an ICO in order to fund the following:

Development consists of -

- Blockchain solution through a decentralized app (DApp)

- Integration of the Teledactyl network with existing platforms

- Expanding Teledactyl network through innovative Telemedicine and medical testing apps

Pie chart: Development 60%, SG&A 25%, Marketing 15%

## Looking Ahead...

| | |
|---|---|
| AUGUST 2018 | PUBLIC TOKENSALE |
| Q4 2018 | BEGIN BUILDING PROTOTYPE AND EXPAND EXCHANGE LISTING |
| Q1 2019 | PATIENT AND PROVIDER OUTREACH TESTING DECENTRALIZED APPLICATION (DAPP) FOR MEDICAL RECORD STORAGE & MANAGEMENT AND PATIENT ONBOARDING & PAYMENTS |
| Q2 2019 | ADD TELEMEDICINE AND MEDICAL TESTING APPS TO TELEDACTYL NETWORK |
| Q3 2019 | OPEN TELEDACTYL PLATFORM TO ACCEPT THIRD-PARTY APPS AND RELEASE FINANCING SOLUTION FOR INDEPENDENT MEDICAL PRACTITIONERS |
| Q4 2019 | DEVELOP PARTNERSHIPS WITH HEALTH INSURANCE PROVIDERS |
| Q4 2020 | TEST ON-BLOCKCHAIN INSURANCE PAYMENTS AND DECENTRALIZED INSURANCE |
